

This folder is used together with any of the rotary feeders in our C45 Unimailer machines. It requires one empty position in front of selected feeder. The rotary feeder feeds the unfolded document directly into the folder, and the folded documents are ejected onto the machine racetrack. This is a cost saving operation as the document can be presented unfolded to the inserter and in that respect saves the extra work with "off line" folding. The folder has two pockets and folds the most common types of folds such as half fold (C5), roll fold (DL) and Z-fold (DL).

SPECIFICATIONS:

2-pocket folder: Most common folds can be achieved in the two integrated folding pockets. Two blind pockets are also supplied with the unit, making it possible also to run material straight through if no folding is required.

Form height: Max. 300 mm
Min. 190 mm

Form width: Max. 300 mm
Min. 190 mm

Fold depth: Max. 215 mm
Min. 70 mm

Paper weight: Max. 130 g/m²
Min. 60 g/m²

Speed: Up to 12,000 cycles/hour depending on thickness of material.
